kaňonový efekt

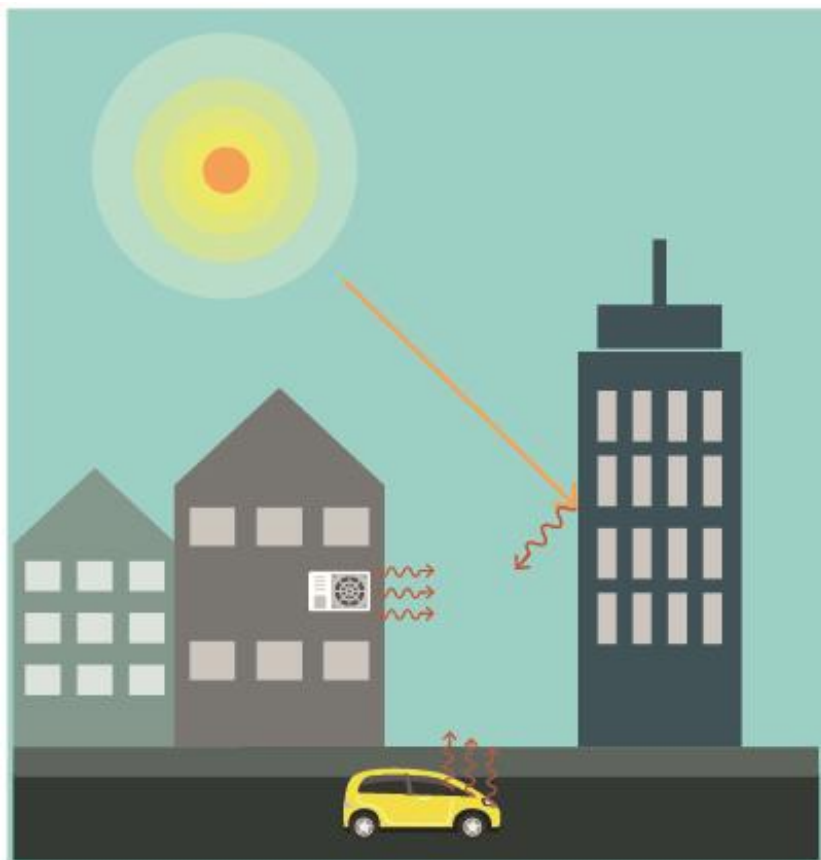

snížení provětrávání

antropogenní teplo

klimatizace

změna vodního cyklu

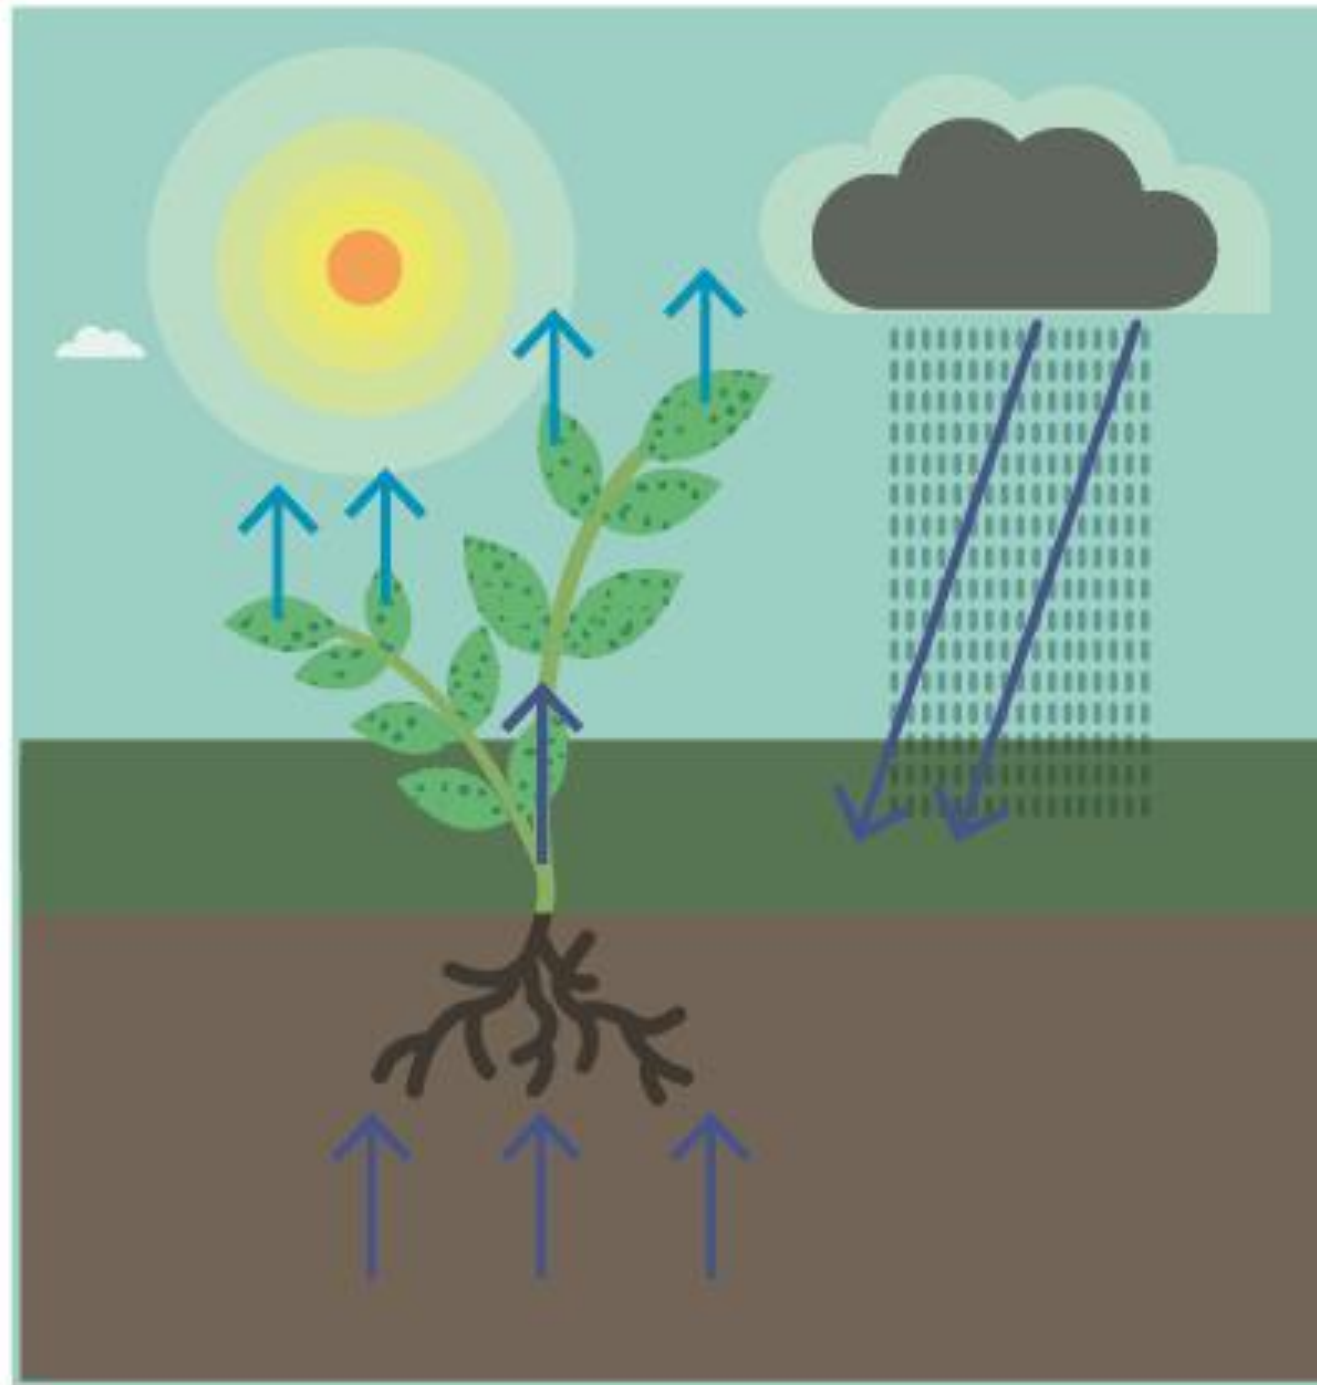

A vibrant scene of children playing at a public fountain in a town square. In the foreground, a young girl with blonde hair is partially obscured by a large, energetic splash of water. To her right, a young boy in a blue shirt and dark shorts is crawling on the wet pavement, reaching towards the water. The fountain itself is composed of several large, light-colored stone basins. Water is spraying upwards from multiple points, creating a dynamic and refreshing atmosphere. In the background, a row of European-style buildings with red-tiled roofs and light-colored facades lines the square. Several cars, including a red one and a silver SUV, are parked along the street. A church spire is visible in the distance under a bright, slightly cloudy sky.

voda, která chladí

A landscape photograph showing a body of water, possibly a lake or a wide river, with a thick layer of white steam or mist rising from its surface. The steam is most concentrated in the middle ground, partially obscuring the water. In the background, a steep, densely forested hillside rises, covered in green trees and shrubs. The sky is a clear, pale blue. The overall scene suggests a natural phenomenon like a geothermal area or a forest fire's aftermath.

teplo ukryté v odparu vody

transpirance

stromy, které stíní a odpařují

„K čemu tam ten strom je? Dyť z něj jenom bude padat to listí. Kdo to bude zametat?“

„Strom tam jen zavazí. Zavazí ve výjezdových rozhledech. Lepší by tam bylo parkovací stání, těch není nikdy dost.“

*„Zasakovat do podloží?
Vždyť to rozruší silnici a zateče lidem
do sklepa.“*

*„U nás skoro nejsou vhodné
geologické podmínky pro
zasakování.“*

Koncepční přístup – modrozelená infrastruktura

Děkuju za pozornost
